

LEGEND

For more information about U.S. Fish & Wildlife Service Priority Trust Species, contact Bob Houston at the U.S. Fish & Wildlife Service Gulf of Maine Coastal Program (207-781-8364, robert_houston@fws.gov).

Introduction
 This map identifies potentially valuable habitat for U.S. Fish and Wildlife Service (USFWS) Priority Trust Species based on the Gulf of Maine Watershed Habitat Analysis developed by the USFWS Gulf of Maine Coastal Program. This analysis was completed for the United States portion of the Gulf of Maine watershed that includes all of Maine, most of New Hampshire, and the eastern third of Massachusetts.

- Habitat Types and Importance**
- Township Boundary
 - Unorganized Township Boundary
 - Selected Town or Area of Interest
 - Developed- Residential, Industrial, Commercial, and Roads

- Habitats**
- | | |
|------------------------------------|--|
| Saltmarsh/saltwater | Freshwater wetlands (non-forested wetlands) |
| 1 - 49% | 1 - 49% |
| 50 - 74% | 50 - 74% |
| Top 25% (most important) | Top 25% (most important) |
| Grassland/shrub/bare ground | Forested (includes forested wetland) |
| 1 - 49% | 1 - 49% |
| 50 - 74% | 50 - 74% |
| Top 25% (most important) | Top 25% (most important) |

Priority Trust Species

The 91 USFWS Gulf of Maine Priority Trust Species include animals and plants that regularly occur in the Gulf of Maine watershed and meet any of the following criteria:

- + Federally endangered, threatened, or candidate species;
- + Migratory birds, sea-run fish and marine fish that show significant and persistent declining population trends, or have been identified as endangered or threatened by 2 or 3 states in the Gulf of Maine watershed;
- + Species of concern as identified in the U.S. Shorebird Conservation Plan, Colonial Waterbird Plan or Partners in Flight.

An asterisk (*) following the name in the list of priority species below indicates that high value habitat depicted on the map at left has the potential to support that species.

- | | | |
|------------------------------|----------------------------|---------------------------|
| BIRDS | BIRDS (cont'd) | BIRDS (cont'd) |
| American bittern* | Marsh wren* | Upland sandpiper |
| American black duck* | Nelson's sparrow | Veery* |
| American oystercatcher | Northern flicker* | Whimbrel |
| American woodcock* | Northern goshawk* | Whip-poor-will |
| Arctic tern | Northern harrier* | White-winged scoter |
| Bald eagle* | Olive-sided flycatcher | Wilson's Snipe* |
| Baldpate* | Osprey* | Wood duck* |
| Bay-breasted warbler | Peregrine falcon | Wood thrush* |
| Bicknell's thrush | Pied-billed grebe* | Yellow rail |
| Black scoter | Piping plover | |
| Black tern | Prairie warbler | FISHERIES |
| Black-bellied plover | Purple sandpiper | Alewife* |
| Blackburnian warbler* | Razorbill | American eel* |
| Blackpoll warbler | Red crossbill | American shad* |
| Black-throated blue warbler* | Red-headed woodpecker | Atlantic salmon* |
| Blue-winged warbler | Red knot | Atlantic sturgeon |
| Buff-breasted sandpiper | Red-shouldered hawk* | Blueback herring* |
| Canada warbler* | Roseate tern | Bluefish |
| Cape May warbler | Ruddy turnstone | Horseshoe crab |
| Chestnut-sided warbler* | Saltmarsh sparrow | Shortnose sturgeon |
| Common tern | Sanderling | Winter flounder |
| Common tern | Scaup (greater and lesser) | |
| Eastern meadowlark* | Seaside sparrow | PLANTS |
| Field sparrow | Sedge wren | E. prairie fringed orchid |
| Golden-winged warbler | Semipalmated sandpiper | Furbish's lousewort |
| Grasshopper sparrow | Short-billed dowitcher | Robbins' cinquefoil |
| Hudsonian godwit | Short-eared owl | Small whorled pogonia |
| Killdeer* | Snowy egret | |
| Least sandpiper | Solitary sandpiper* | MAMMAL |
| Little blue heron | Spruce grouse | Canada lynx |
| Little gull | Surf scoter | |
| Louisiana waterthrush | Tricolored heron | REPTILE |
| | | Plymouth redbelly turtle |

Mapping Valuable Habitat
 Using a Geographic Information System (GIS), valuable habitat was mapped by combining field sightings (collected by various agencies and non-governmental organizations) and habitat modeling. Frequently, sightings are too limited to adequately represent all habitat used. Therefore, habitat models based on selected environmental conditions can be helpful in more fully predicting potential habitat utilization.

To create the final map shown on this page, we first identified habitat for each of the 91 species in the analysis and ranked its importance on a scale of one to ten, with ten being considered the most important. Next, we combined the scores for each of the species to create a sum of scores. Then, we subdivided the sum of scores into the four basic habitat types shown on this map. Finally, we portrayed the data in a three level gradient (the top 25%, the next 25%, and then, the bottom 50% of the habitat value for each habitat type). The top 25% may be considered the most important habitat in that gradient.

Uses of the Data
 This map may be used in combination with other data sources to help identify potentially valuable wildlife habitat at the local or town level. This information can be incorporated into town comprehensive planning or open space planning. It may also be used to help prioritize habitat protection by local land protection organizations or to support grants for habitat protection. This map represents only one possible way of portraying the model results; there are many other maps that may be derived from the data. Please contact the Gulf of Maine Coastal Program for more information and assistance.

Limitations of the Data
 Maps of habitats for individual species are limited by the accuracy and timeliness of the data sets used in developing them and by the validity of models used to interpret those data. We used the most recent data available and relied on species experts to review the models. We also tested predicted habitats using occurrence data. Habitat maps rely quite extensively on land cover and the land cover used for this project is based on the interpretation of 1993 satellite imagery with a resolution of 30 meters (each pixel on the map is about 1/4 acre). It is important to realize that if land cover has changed significantly since 1993 in a given area, the predicted habitat value for individual species may no longer be reliable. We must also emphasize that this map only depicts predicted high value habitat for the species included in the analysis; important habitat may exist for other species not included in this analysis. Other important USFWS habitat of significance includes Nationally Significant Maine Coastal Nesting Islands, areas around National Wildlife Refuges, and specific endangered species habitat. There also may be important habitat information available from state conservation agencies or other environmental organizations. In addition, this map does not show buffer zones that should be included to protect valuable wildlife habitat.

For More Information
 The Gulf of Maine Coastal Program can provide more information that will help support your habitat protection initiatives. This includes detailed parcel-specific maps, detailed tables delineating habitat importance for each of the 91 species and assistance in grant-writing for some habitat protection grants. For more information please contact us or see our website <http://www.fws.gov/northeast/gulfmaine>.
